Summary

AI/ML-focused Computer Science student with experience building LLM-powered applications, RAG pipelines, multi-agent workflows, and Python-based automations. Combines AI integration with full-stack engineering, API development, and testing to deliver practical, reliable software.

Technical Skills

AI/ML: Machine Learning, LLMs, Generative AI, NLP, Computer Vision, embeddings, RAG, vector retrieval, prompt engineering
Agentic AI: LangChain agents, multi-agent workflows, multi-provider model routing, MCP (include only if hands-on)
Frameworks/Libraries: scikit-learn, Hugging Face, OpenCV, n8n, Vercel AI SDK
Programming & Engineering: Python, SQL, JavaScript/TypeScript, REST APIs, PostgreSQL, Firebase, Docker, Git, Playwright, GitHub Actions

Education

Indus University **July 2023 – June 2027**
B.Tech in Computer Science *Ahmedabad, Gujarat*

Experience

Ideaboat Solutions **July 2026 – November 2026**
Python Developer Intern
- Contributed to Python development and full-stack application features, including AI-related functionality and API-connected workflows.
- Worked on CRM-related features and end-to-end product implementation across frontend/backend tasks (FDE-style responsibilities).

Phaze AI **December 2025 – February 2026**
AI Automation Intern *Remote*
- Built 5+ n8n automation workflows for business processes, with approximately 40% reduction in manual task time reported.
- Developed LLM-enabled agentic workflows for decision support and task execution.
- Integrated 6+ third-party APIs into end-to-end automation pipelines.

Projects

OfferGuard AI (Reverse Interview) | *Multi-Agent GenAI, React 19, Vercel AI SDK* **2026**
- Built a multi-agent job-offer analysis application with specialized checks for salary, burnout, toxicity, and negotiation.
- Integrated Groq, Mistral, Gemini, and OpenRouter; implemented Firebase authentication, OCR document parsing, Playwright end-to-end tests, and GitHub Actions CI/CD.

Codebase Oracle | *LLM + RAG System* **2025**
- Built natural-language question answering over codebases, repository structure, and dependencies using retrieval-augmented generation.
- Worked on embedding-based retrieval to improve relevance of context provided to the language model.

ResumeMaster AI (Job Snipper) | *GenAI Platform* **2025**
- Developed an AI-assisted resume optimization platform using semantic job-fit analysis.

UPI Fraud Detection System | *Machine Learning* **2024**
- Built a fraud-detection pipeline with feature engineering and model optimization. Add dataset and precision/recall/F1 metrics only when verified.
