Summary

Full-stack developer and Computer Science student experienced in building and deploying web applications integrating React, TypeScript, backend APIs, databases, authentication, and AI services. Recent work includes AI infrastructure discovery, browser-agent observability and regression testing, multi-agent applications, and CRM-connected Python workflows.

Technical Skills

Frontend: React, React 19, TypeScript, TanStack Start, Vite, Tailwind CSS, shadcn/ui
Backend: Python, Node.js, Express.js, FastAPI, REST APIs
Databases & Authentication: PostgreSQL, Firebase, Supabase, MongoDB, JWT
AI Engineering: LLM APIs, Vercel AI SDK, LangChain, RAG, vector databases, OCR, n8n
Testing & DevOps: Playwright, Git, Docker, GitHub Actions, CI/CD

Education

Indus University **July 2023 – June 2027**
B.Tech in Computer Science Engineering *Ahmedabad, Gujarat*

Experience

Ideaboat Solutions **July 2026 – November 2026**
Python Developer Intern

- Contributed to Python development and full-stack application features, including AI-related functionality and API-integrated workflows.
- Worked across frontend and backend tasks on CRM-related features and end-to-end product implementation.

Phaze AI **December 2025 – February 2026**
AI Automation Intern *Remote*

- Built 5+ n8n automation workflows for business processes, with an approximately 40% reduction in manual task time reported.
- Integrated 6+ third-party APIs into automated workflows and connected LLM-based decision-making and task-execution processes.

Selected Projects

Lattice – AI Infrastructure Directory | *AI Infrastructure, Product Development* **2026**

- Built and launched an AI infrastructure directory organizing tools by stack layer to help developers discover relevant infrastructure components.
- Launched on Product Hunt in October 2026.

Walkcast – Agent Observability & Regression Testing | *TypeScript, Node.js, Playwright, PostgreSQL* **2026**

- Built a browser-agent recording and test-harness workflow that converts failed runs into reproducible regression fixtures using before-and-after application state.
- Documented validation across 129 test cases in the project case study, focusing on reproducible fault replay rather than generalizing results to all browser agents.

OfferGuard AI – Reverse Interview | *React 19, TanStack Start, Firebase, Vercel AI SDK* **2026**

- Built a job-offer analysis application with multi-agent analysis, Firebase authentication, OCR-based document parsing, and multi-provider LLM routing.
- Added Playwright end-to-end tests and GitHub Actions CI/CD to support automated application validation.

ArchMind AI | *React, FastAPI, PostgreSQL* **2026**

- Built an AI architecture-planning application that generates architecture diagrams, technology recommendations, and infrastructure-as-code suggestions from natural-language inputs.
- Implemented simulation and compliance-scoring features for evaluating proposed architecture configurations.
